

HealthSathi — IKS Personalized Wellness Report

A Data-Driven Framework for Personalized Lifestyle Analytics Grounded in Indian Knowledge Systems (Ayurveda)

IMPORTANT SAFETY & NON-DIAGNOSTIC DISCLAIMER: HealthSathi is an educational and lifestyle wellness prototype, not a medical diagnostic or prescription system. It does not diagnose clinical conditions, prescribe medications, replace licensed medical practitioners, or advise changing any ongoing medical treatment. All self-reported conditions are treated strictly as lifestyle context.

1. User Profile & Lifestyle Metrics

Age: 28	Gender: Male	Height: 175.0 cm	Weight: 72.0 kg
BMI: 23.5 (Normal)	Occupation: Working Professional (IT/Corporate)	Sleep: 5.5h (Poor)	Bedtime: 01:00 AM
Activity: 15.0 min/day	Sunlight: 15.0 min/day	Water Intake: 1.6 L	Screen Time: 9.0 hrs
Stress Level: 8/10	Mood: Low	Relaxation: No	Meals: Irregular
Self-Reported Health Context: Anxiety/stress-related concerns			

2. Derived Lifestyle Wellness Scores

Overall Lifestyle Wellness Score	38.8 / 100	Needs Attention (Hina Vihara)
Sleep Score	57.9 / 100	Evaluates duration, quality, and circadian bedtime alignment
Physical Activity Score	34.3 / 100	Movement minutes and outdoor sunlight exposure vs. screen time
Stress Management Score	31.9 / 100	Autonomic balance, emotional tone, and mindfulness pauses
Hydration Balance Score	60.5 / 100	Fluid intake calibrated to weight and metabolic demand
Routine Consistency Score	47.5 / 100	Adherence to consistent wake-up, meal, and work schedules
Nutrition / Diet Score	10.0 / 100	Fresh food frequency, breakfast habit, and stimulant moderation

3. Personalized Dinacharya (Daily Routine Schedule)

Time	Ayurvedic Phase	Recommended Action & Guidance
06:30 AM	Brahma Muhurta / Ushahkala (Vata to Kapha Transition)	Awaken Mindfully & Ushnodaka Hydration: Rise quietly. Cleanse eyes, mouth, and tongue (Jihwa Nirlekhana). Sip 1-2 glasses of warm lukewarm water to awaken peristalsis (Agni Deepana).
07:00 AM	Prataha Vyayama (Kapha Pacification (Circulation & Agni))	Light Physical Movement / Yoga / Surya Namaskar: Perform 20 minutes of mindful exercise up to half your capacity (Ardhshakti). Include gentle joint loosening and 5 minutes of Sukhasana breathwork.
07:45 AM	Pratarasa (Breakfast) (Pitta Sparking & Energy Grounding)	Warm Grounding Nourishment: Freshly cooked, warm meal (e.g. spiced whole grains, warm porridge, stewed fruits). Avoid cold smoothies or heavy fried items.
08:45 AM	Karma Yoga (Morning Focus) (Kapha Stability & Clarity)	Deep Focused Work / Academic Study: Tackle the most demanding analytical or strategic tasks while mental clarity (Sattva) is peak and distractions are minimal.
11:15 AM	Prana Pause (Alochak Pitta (Eye Strain Relief))	Sensory Rest & Hydration: Step away from screens for 5-10 minutes. Practice 20-20-20 eye relaxation and sip room-temperature water or herbal tea.

01:00 PM	Madhyanha Bhojana (Primary Lunch) (Peak Pitta Agni (Optimal Assimilation))	Main Substantial Meal of the Day: The solar fire is at its zenith; digestive Agni is strongest. Enjoy your most substantial, balanced meal with all six tastes (Shad-Rasa) in a calm setting without screens.
02:30 PM	Apara Karma (Vata Creative Window)	Collaborative Work & Creative Execution: Afternoon tasks, communications, administrative duties, or creative exploration. Keep posture upright.
06:00 PM	Sandhyakala Movement (Vata Balancing & Transition)	Outdoor Walk & Natural Sunlight: Step outdoors for 25-35 minutes. Natural light exposure during late afternoon supports circadian alignment, mood regulation, and gentle movement.

4. Curated IKS Recommendations & Explainability

Recommendation 1: Sleep as Pillar of Vitality (Nidra Trayopasthambha)

Guideline: Prioritize establishing a restful 7 to 8-hour sleep sanctuary. Discontinue active digital screens at least 60 minutes prior to rest and consider a warm foot massage (Padabhyanga) with sesame oil before bed to calm agitated Vata dosha.

Why am I getting this? Your reported sleep duration is 5.5 hours (< 6.5 hr guideline). Triggered because your reported sleep duration is under 6.5 hours. In classical IKS physiology, insufficient restorative sleep creates dry and irregular Vata disturbances that sap vitality and impair next-day cognitive agility.

Authentic Source: Charaka Samhita (Sutrasthana Chapter 21 - Ashtauninditiya) | Ref: Charaka Samhita Sutrasthana 21.36

Recommendation 2: Circadian Night Regimen (Ratricharya)

Guideline: Gradually bring your bedtime closer to 10:00 PM to 10:30 PM. The early night hours are governed by Kapha stability, facilitating deep cellular repair and authentic sleep architecture.

Why am I getting this? Your reported bedtime is 01:00 AM (after 11:30 PM). Triggered because your reported bedtime is after 11:30 PM. Sleeping during the late-night Pitta surge can lead to interrupted sleep, morning grogginess, and ungrounded energy.

Authentic Source: Astanga Hridaya (Sutrasthana Chapter 2 - Dinacharya Adhyaya) | Ref: Astanga Hridaya Sutrasthana 2.18

Recommendation 3: Balanced Physical Exercise (Vyayama Maryada)

Guideline: Incorporate 30 to 45 minutes of light-to-moderate morning movement, such as Surya Namaskar (Sun Salutations), brisk walking, or gentle joint rotations (Sukshma Vyayama).

Why am I getting this? Your reported physical activity is 15.0 min/day (< 30 min minimum). Triggered because your reported physical activity is below 30 minutes daily. Ancient texts state that regular mindful movement stokes digestive Agni, reduces lethargy (Tamas), and keeps joint srotas supple.

Authentic Source: Astanga Hridaya (Sutrasthana Chapter 2 - Dinacharya Adhyaya) | Ref: Astanga Hridaya Sutrasthana 2.10-12

Recommendation 4: Mindful Conduct and Meditation (Sadvritta & Dhyana)

Guideline: Practice 10 to 15 minutes of Nadi Shodhana (Alternate Nostril Pranayama) and cooling breathwork (Sheetali/Bhramari) upon waking or before evening meals to pacify autonomic tension.

Why am I getting this? Your reported stress score is 8/10 (elevated psychological tension). Triggered because your reported stress level is elevated (>= 7/10). In IKS principles, persistent high tension constricts subtle biological channels (Manovaha Srotas) and compromises restful mental clarity.

Authentic Source: Charaka Samhita (Sutrasthana Chapter 21 - Ashtauninditiya) | Ref: Charaka Samhita Sutrasthana 11.54

5. Traditional Botanical Wellness Information (Educational Reference)

Botanical / Sanskrit	Traditional System & Profile	Modern Research Note & Cautions
----------------------	------------------------------	---------------------------------

Ashwagandha <i>Withania somnifera</i> (Ashwagandha)	Traditionally revered in Ayurveda as a premier Rasayana (rejuvenator) and Medhya herb known to pacify Vata and Kapha doshas and support vitality (Ojas). Attributes: Tikta-Kashaya-Madhura / Ushna / Madhura	Modern pharmacological investigations observe adaptogenic properties that may assist the body in modulating physiological responses to chronic stress and cortisol levels. Caution: Traditionally considered safe in culinary/tonic quantities. Avoid during pregnancy or with acute hyperthyroid medications without physician supervision.
Tulsi (Holy Basil) <i>Ocimum sanctum</i> (Tulasi)	Revered as the 'Queen of Herbs' and an exemplary adaptogen that clears the respiratory channels (Pranavaha Srotas) and uplifts the mind (Sattva). Attributes: Katu-Tikta / Ushna / Katu	Scientific studies report antimicrobial, cardioprotective, and adaptogenic properties that support resilience against physical and environmental stressors. Caution: Safe for daily culinary infusion (tea). Moderation recommended for individuals trying to conceive or on blood thinners.
Brahmi <i>Bacopa monnieri</i> (Brahmi)	Premier Medhya Rasayana (nervine tonic) in classical Ayurveda dedicated to enhancing Dhi (acquisition), Dhriti (retention), and Smriti (recall). Attributes: Tikta-Kashaya / Sheeta / Madhura	Clinical trials demonstrate bacosides facilitate synaptic communication, support brain neurochemistry, and assist healthy working memory in adults. Caution: Generally well tolerated when taken with healthy fats (ghee/milk). Mild gastrointestinal sensitivity may occur on an empty stomach.
